INTRODUCING 'THE GLOW BOY'

Buy the Fireplace with a Difference! What's the difference?

Other Units: use outside air for combustion only or heating only.
Glow Boy: uses triple circulated outside air for combustion as well as for heating the house.

What does that mean to you?

Preheated combustion air — increases combustion efficiency, lowers amount of smoke generated and allows greater dampening down of the fire, trapping more heat in the fireplace. Triple circulated outside air for heating — puts more HEAT into the air which is moving into the house from outside.

Pressurized heating: air from outside being super heated, forced into the home, and not being lost up the chimney sets up a flow of heat away from the fireplace into other rooms. Brings up the heat in the other rooms as cooler air is now forced out of the house through normal draft areas.
